

ISPM White Paper: Tweets

1.

 Over 90% of breaches in 2024 were identity-related. That's not a stat—it's a spoiler alert. ISPM (Identity Security Posture Management) isn't a luxury anymore. It's foundational.

2.

Legacy IAM can't keep up with the identity sprawl of today's hybrid enterprises. Static controls + manual reviews = risk. #ISPM brings real-time visibility and automation to the fight.

3.

Not all identities are human. Most orgs have more bots, APIs, and service accounts than people—and they're rarely governed. #ISPM sees them. Scores them. Shuts down their risk.

6.

#ISPM isn't just a tech stack update—it's a strategic shift.

From reaction to prevention. From static reviews to continuous remediation. From cost center to security enabler.

7.

You can't secure what you can't see.

Visibility is the first principle of identity security. #ISPM inventories *everything*: humans, machines, entitlements, risk signals.

8.

Manual #IAM processes can't scale. #ISPM uses automation to revoke risky access, enforce least privilege, and flag drift—at speed.

Because hackers aren't waiting.

10.

#ISPM isn't another dashboard. It's a strategic control layer for securing human and machine identities—across all environments.

Modern threats demand continuous posture management.
